PROFESSIONAL SUMMARY

AI Engineer with a background in Artificial Intelligence and Data Science (2026) with strong foundations in Python, AI, and Generative AI. Experienced in building LLM- applications using FastAPI and LiteLLM, including multi-provider LLM routing and agentic tool-calling systems. Hands-on experience in developing Retrieval-Augmented Generation (RAG) applications with vector databases, embeddings, and LLM integration. Passionate about building scalable AI solutions and continuously learning emerging AI technologies.

TECHNICAL SKILLS

Programming Languages: Python, TypeScript

Frameworks/Libraries: FastAPI, LangChain, LiteLLM, ReactJS, LangGraph, Numpy, Pandas

Tools: Git, Github, Make.com, n8n, Pabbly Connect, Gemini, Claude, OpenAI, LangSmith, CI/CD Piplines

Generative AI/LLMs: LLM, RAG, Tool Calling, AI Agent

Database: MongoDB, MySQL, ChromaDB

Core Concepts: Prompt Engineering, Rest API, API Integration, HuggingFace Embedding

PROJECTS

Research Paper Assistant — RAG (React, Python, MongoDB) https ://research-paper-frontend-lovat.vercel.app/

- Developed a Research Paper Assistant using RAG that enables users to upload PDFs, perform semantic search, and generate context-aware answers from research documents.
- Implemented AI features including document chunking, embeddings, source-cited responses, semantic retrieval, and automatic Groq/Gemini LLM fallback for reliable question answering.
- Indexed 50+ document chunks, achieved <3s average response time, improved answer quality by 35%, and reduced LLM hallucinations through retrieval-grounded generation.

AI-Powered Coding Assistant — Web Application (React, Python)

- Developed an AI-Powered Coding Assistant web application that analyzes source code, understands developer queries, and generates intelligent suggestions to help write cleaner code, fix bugs, optimize performance, and improve overall code quality.
- Integrated AI features for bug detection, code optimization, code explanation, and best-practice recommendations.
- Processed over 1,000+ code analysis requests with an average response time of 1.8 seconds, achieving 92% bug detection accuracy and reducing debugging time by 35%.

EXPERIENCE

Data Science — (Prodigy InfoTech) | View Certificate Sep 2024 – Oct 2024

- Built a strong foundation in Data Science, including data collection, cleaning, preprocessing, and manipulation.
- Gained hands-on experience with Python and essential data science libraries for data analysis and automation.
- Applied Data Visualization and Data Preprocessing techniques to transform raw data into meaningful insights.

Artificial Intelligence — (Anapty Codeemy Technologies Private Limited) |View Certificate Nov 2025 – Feb 2026

- Completed an Artificial Intelligence Internship, gaining practical knowledge of AI, Machine Learning, and Data Science concepts.
- Worked on hands-on AI projects, applying theoretical concepts to solve real-world problems.
- Strengthened practical skills in AI development, model implementation, and end-to-end project execution.

EDUCATION

Dhanalakshmi College of Engineering — Tambaram, Chennai Oct 2022 – May 2026

B.Tech - Artificial Intelligence and Data Science

CGPA : 8.32 /10

CERTIFICATE

AWS Academy Graduate — AWS Academy Cloud Foundations
